

## Sonic Sound Block Panels: The latest commercial innovation from Lamvin

**Oceanside, CA – July 13, 2021** - Lamvin, a manufacturer of premium acoustical products, has introduced a new acoustical solution to market: Sonic Sound Block™ Panels. Noise barrier wall panels offering superior sound absorption and noise blocking performance, the Sonic Sound Block offering was created in response to today's modern, open commercial office designs, helping to ensure privacy and mitigate the likelihood of confidential conversations from being overheard.

**Sonic Sound Block Panels** are constructed using one pound-per-square-foot non-reinforced mass-loaded vinyl barrier between two layers of fiberglass board. The thickness and rigidity of the materials solve speech privacy problems in corporate offices, conference and hotel rooms, restaurants, doctor's offices or anywhere noise is a concern. The [NUMBER] of color and fabric options make them versatile addition to commercial spaces, as do the variable mounting options.

“Sonic Sound Block Panels can be easily installed using impaling clips, construction adhesive or snap-on anchors,” explained Douglas Shantz, Lamvin North America Sales Director. “When we created this new product, we wanted to make it as customizable and accessible as possible. I’d say we achieved our goal with near-limitless ways to personalize the product to personal preferences and design tastes.”

Weighing two-and-a-half-pounds per square-foot, Sonic Sound Block Panels must be installed from floor-to-ceiling. A striking and aesthetically pleasing addition to any room, four edge shapes are offered: mitered, beveled, radiused and squared. Once in-place, floor molding can be re-installed, for a sleek and polished finish.

Boasting an impressive 29 Sound Transmission Class (STC) rating, Sonic Sound Block Panels also have been fire tested, rated ASTM E84-Class I/A, helping to not only improve the security of sensitive information, but the physical safety of the space's occupants as well.
