Introducing Oceanside, A New, Sustainable Acoustic Panel Kit From LAMVIN

Oceanside, CA, July 12, 2022 | LAMVIN, a [Catalyst Acoustics Group](#) company and manufacturer of premium acoustical products, has added a new program to its eco-friendly acoustic product offerings with the launch of Oceanside, a set of Earth-conscious fabric-wrapped panels. Shipping with all necessary hardware and three design configurations, each 16-panel kit can cover 32 square feet of wall space for a sizeable spatial, acoustical and environmental impact.

Oceanside panels are manufactured without the use of formaldehyde and wrapped with 100% post-consumer recycled biodegradable fabric in ocean-inspired, natural tones. Three fabrics, Sea Grass, Dune, and Pebble, and their accompanying Rotofast™ snap-on anchors were selected with versatility and ease of installation in mind.

“We took all guesswork out for the end-user,” explained David Castellanos, President of LAMVIN. “The neutral colors will fit into most any décor, and by following any of the three provided design layouts, even a novice DIY-er can install these panels for a high-end statement wall look within minutes.”

Castellanos remarked about the material make-up noting that this, too, was carefully curated. “You can feel good about Oceanside. These panels are specifically produced to meet California Section 01350 qualification for clean air emissions, one of the strictest in the country.”

Mark Rich, Lamvin’s Vice President of Sales, echoed Castellanos’ enthusiasm about the program introduction adding, “Oceanside provides a foolproof way to add ambience while removing noise distractions from a space. In other words, it captures the feelings of solitude experienced during a day at the beach, any day, and indoors!”
